Work and living areas in a new dimension

Places, where people are supposed to work creatively and concentrated, are to have a special atmosphere. The atmosphere that would inspire your work and stimulate your senses. Light-flooded rooms full of sun, warmth, transparency, with optimized climatic conditions that let you enjoy the nature in and outside the house.

Ecologically harmless materials, harmonious colours.

The half-timbered construction, clear, open, adaptable space structures allow for a variable plan arrangement and functional assignment so that you can tailor your house to your exact needs. The DAVINCI HOUSES are constructed as skeleton frame buildings. Such design creates the total flexibility and variability of modular planning.
